Solution Design

Purpose – Azure Architects

- Subject matter expertise in designing cloud and hybrid solutions
- Expertise includes compute, networking, storage, application services, data solutions, monitoring and security.

Prerequisites

- Working knowledge of networking technologies including connectivity services, application delivery services, and network architectures.
- Working knowledge of storage technologies including relational and non-relational data solutions.
- Working knowledge of compute technologies including virtual machines, containers, and PaaS compute solutions. .
- Experience architecting solutions including security, migration, and business continuity.

AZ-305 Agenda

Module 01 Design a governance solution

Module 02 Design a compute solution

Module 03 Design a non-relational data storage solution

Module 04 Design a data storage solution for relational data

Module 05 Design a data integration solution

Module 06 Design an application architecture solution

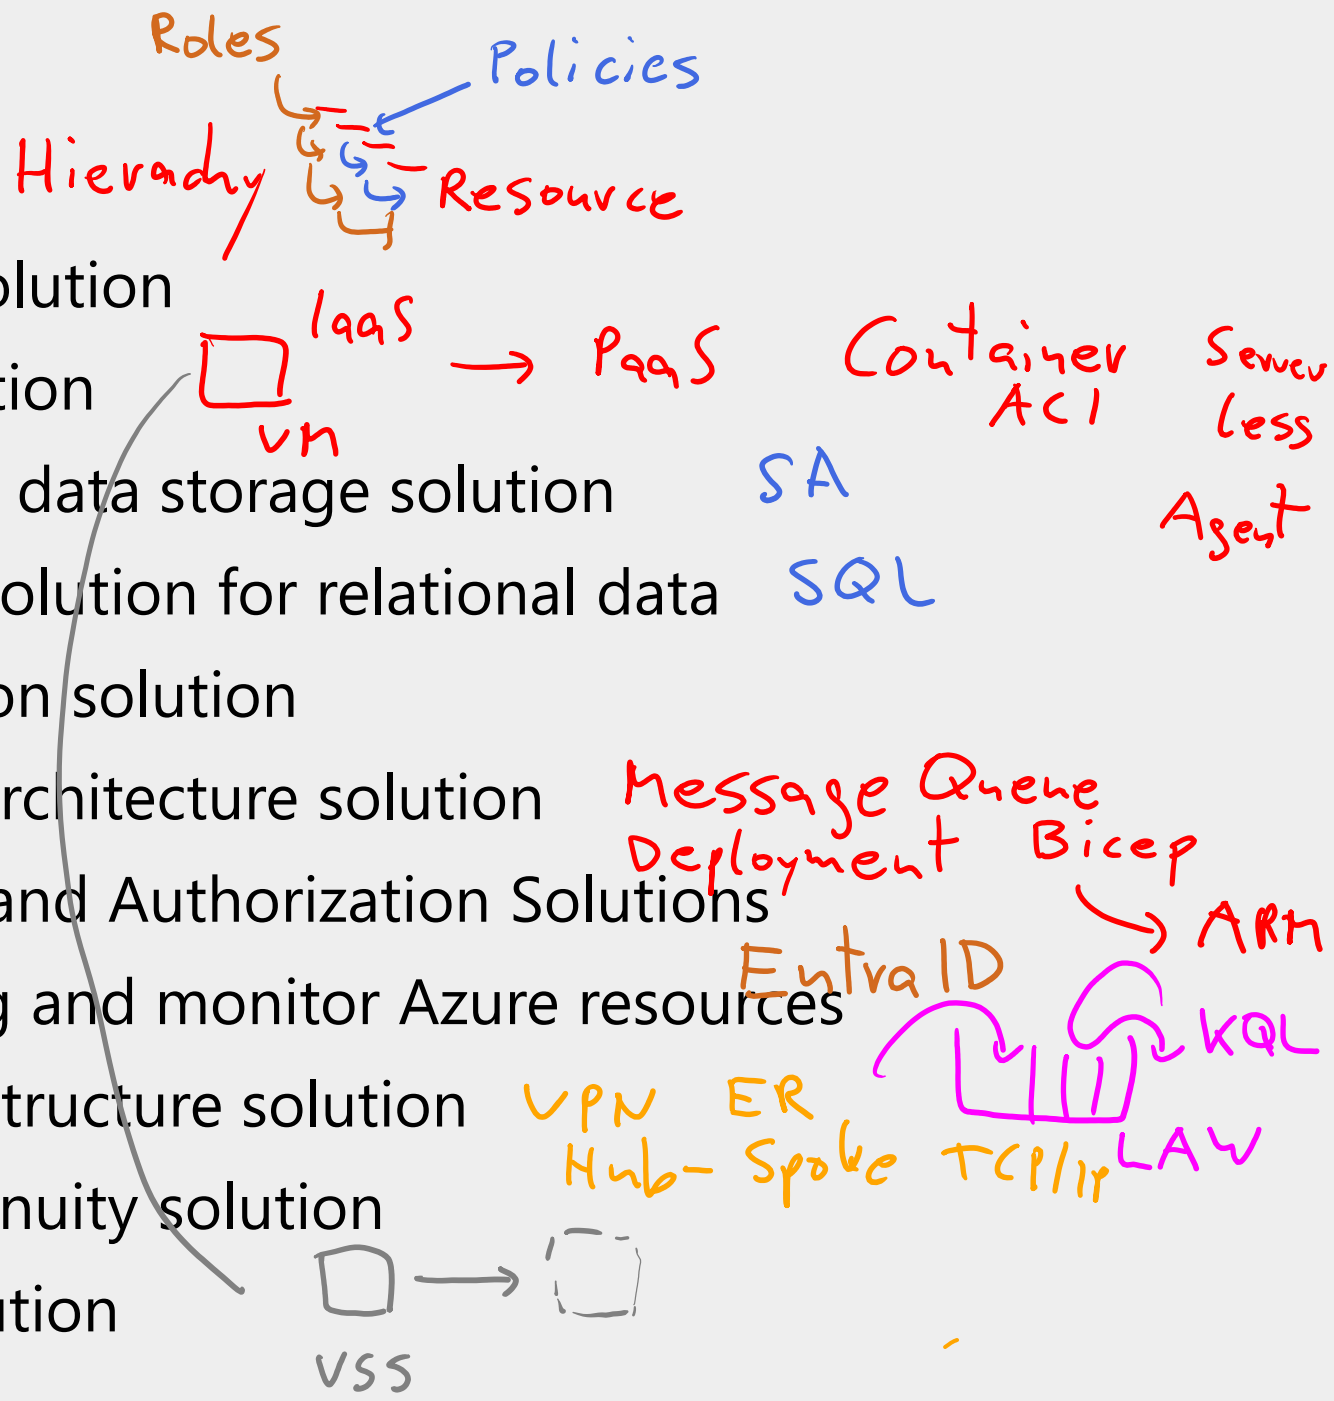

Module 07 Design Authentication and Authorization Solutions

Module 08 Design a solution to log and monitor Azure resources

Module 09 Design a network infrastructure solution

Module 10 Design a business continuity solution

Module 11 Design a migration solution

Exam AZ-305: Designing Microsoft Azure Infrastructure Solutions

Understand the skills measured by the exam

Study area	Percentage
Design identity, governance, and monitoring solutions	25-30%
Design data storage solutions	20-25%
Design business continuity solutions	15-20%
Design infrastructure solutions	30-35%

Build confidence in your skills

Find in the exam page resources to help prepare

Case studies

- Tailwind Traders is modernizing its infrastructure and moving to the cloud -
- You have been asked to recommend and suggest new cloud architectures - requirements and tasks are provided in case studies
- Make sure to actively participate in small groups or individually
- Become familiar with the Azure Architecture Center, Azure Charts, and the Azure Documentation.
- Consider the Cloud Adoption Framework and Well Architected Framework as you design your case study solutions (next slides)

AZ-305T00 - Design Microsoft Azure Infrastructure Solutions (Cloud Share) (2024)

In this course, you will learn how to design and implement cloud and hybrid solutions on Azure, covering key areas such as compute, network, storage, monitoring, and security. You'll gain expertise in translating business requirements into Azure solutions that align with best practices, including the Azure Well-Architected and Cloud Adoption Frameworks. Additionally, you'll explore advanced concepts in Azure administration, development, and DevOps processes, while collaborating with various IT roles to create comprehensive solutions.

AZ-305T00 - Design Microsoft Azure Infrastructure Solutions (Cloud Share) (2024)

This course teaches Azure Solution Architects how to design infrastructure solutions. Course topics cover governance, compute, application architecture, storage, data integration, authentication, networks, business continuity, and migrations. The course combines lecture with case studies to demonstrate basic architect design principles.

1. Tagging resources and implementing policy restrictions

1 h

0%

In this lab, students will navigate the Azure portal, learning to create and manage resources such as virtual machines, storage accounts, and network components. They will set up a virtual machine, explore the Azure dashboard, and grasp cloud computing fundamentals within Azure, aiming to get comfortable with Azure's environment and basic resource management.
